

REFRACTORIES MATERIALS TESTING

As a UKAS ISO 17025* accredited testing laboratory (No. 0013), Lucideon provides a comprehensive refractories testing service to both national (BS, ASTM), international standards (ISO) and our own in-house, UKAS-accredited standards.

We offer a wide range of physical, chemical, mineralogical and thermomechanical testing for:

- Quality control
- Quality assurance
- Failure analysis
- Tendering support
- Creation of datasheets
- Modelling purposes

We can inspect and sample refractory materials on-site or before shipment to ensure materials are suitable for use and to avoid costly delays.

Our testing is backed up by in-house refractory consultants who can assist with applications, processes and other performance issues.
